## wintermute is nearline and extremely scalable

- Runs next to the clinical workstation (CWS)
- Listens to events from the CWS, interprets, writes back to CWS
- One guardian angel process per patient
- CWS can suggest actions based on that bulletin board message

NO data ownership

it is NOT only about consent

there ARE RIGHTS AND OBLIGATIONS,  
also for the patient

## Transparency: information, not necessarily informed consent

The requirement to obtain informed consent may originate from different regulations:

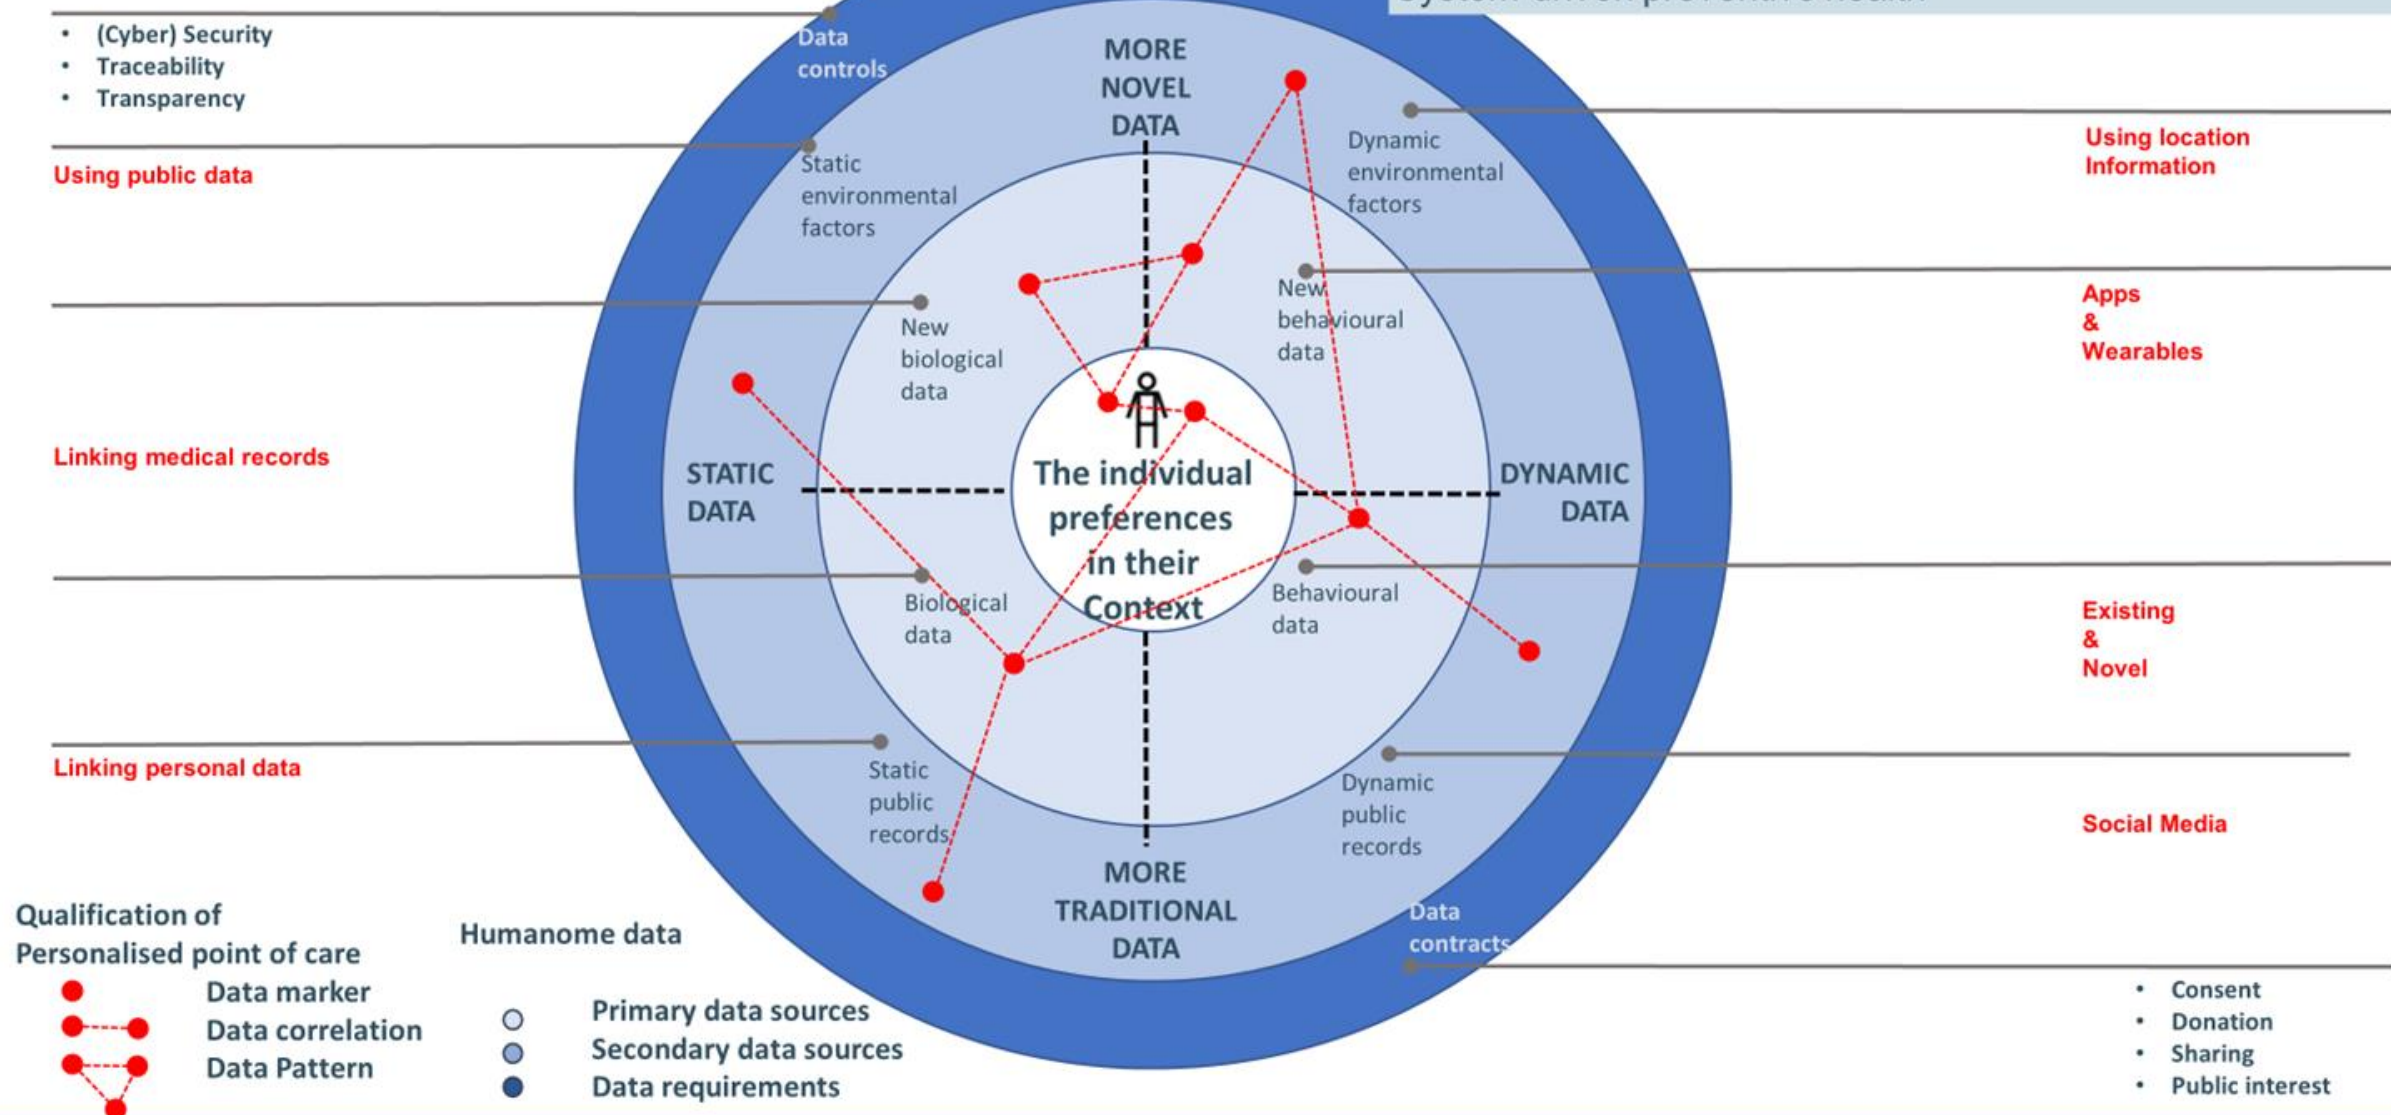

- Patient's rights
- Experiments on the human person
- Fundamental rights to privacy and data protection

Important difference:

- In the [GDPR](#), the requirement for informed consent is **one possible** legal basis, the alternatives are equally good
- In the [law on patient's rights](#) and [clinical trials regulations](#), informed consent is an **absolute requirement**, there are no alternatives

# THE HUMANOME – A PERSONALISED POINT OF CARE DATA CONCEPT

Individual-driven preventive health  
 Individual-driven preventive health, motivating the system  
 System-driven preventive health, motivating the individual
